

## Computing

Over the period school has been closed, we realise that you have not been able to complete any computing work and continue to apply and develop your coding and programming skills.

Therefore, this week we would like you to complete a series of coding-based activities, similar to those you complete on Scratch.

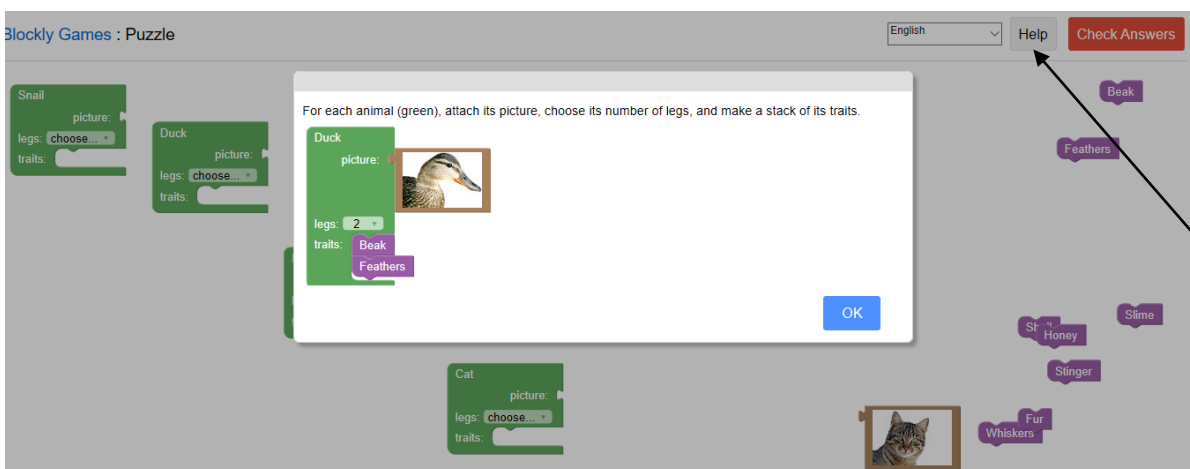

Click on the following link or type into your browser: <https://blockly.games/>

This should bring up the following screen:

On here are 8 activities that you can spread out across the week and are different, which all allow you to apply your coding and programming skills. Go through them one by one.

Each activity has a help section. For example, activity one has a help section in the top right corner as shown below:

Activity one is relatively straight forward but the tasks do get more complicated. Some activities have extra stages within them such as the second activity.

Hopefully, you will enjoy completing these activities and doing some computing work at home. Send us some screenshots of the work you manage to complete.
